

FYNOA

A conversational, personalized bank for Gen Z in France.

Mohammad Saeed Ahmadi Pouya | Founder

Azadeh Khani Solout | Co-Founder

The Problem

- Gen Z is mobile-first, but banking still forces forms and menus.
- Low personalization and outdated security create friction and distrust.
- Fragmented journeys lead to drop-offs, low engagement, and exclusion.

Solution

Talk naturally

Voice & Chat-first
banking

Adapt in real time

Context-aware &
behavior-driven
finance

Built for Trust

Secure & Compliant
& inclusive by
design

Addressable Users Funnel

Market Size

(France, Gen Z 15–29,
Smartphone-adjusted)

- Target segment: Gen Z (15–29), mobile-native
- Smartphone penetration: 94.1% (INSEE)
- Phased rollout: City → Region → National
- Pilot: 13K Users
- This is a distribution-constrained market, not a demand-constrained one

Competitive Landscape

France / Gen Z Banking

Traditional Banks & Legacy Apps

- Strong trust & regulatory compliance
- Poor UX, no meaningful personalization
- Not conversational, not Gen Z-native

Neobanks & Fintech Apps

- Better UX, mobile-first experience
- Limited AI depth & shallow personalization
- Compliance-first AI not a core product capability.

Generic AI / Chatbot Solutions

- Powerful LLMs, fast iteration cycles
- Not built for ACPR / AMF constraints
- No auditability or explainability

Gap: Conversational, personalized, AI-native banking designed for French regulation.

Why AI-first fails and compliance-native wins?

Regulation-native UX

- Built for ACPR / AMF from day one
- No retrofitted compliance
- No UX trade-offs

Real-time, explainable AI

- Decisions users and regulators can understand
- Banking context, limits & alerts in real time

Trust users don't have to think about

- Audit-ready by design
- Banks keep control, users gain confidence

Designed to work with licensed institutions, not around them.

Business Model

France-first & Compliant

Licensing

(B2B / B2B2C)

AI & conversational
banking modules for
regulated partners
(banks / PSPs)

Subscription

(B2C)

Freemium → Premium
monthly plans

Revenue Share (Selective)

Compliant transaction-
based revenue via
licensed institutions

Compliance-first AI Banking Architecture

- **Conversational banking engine built for regulated environments**
Voice & chat flows designed around ACPR / AMF constraints, not generic LLM chat interfaces.

- **Modular AI stack for banks & PSPs**
Deployable as licensed modules (KYC, transaction explanation, limits, alerts) via B2B / B2B2C.
- **Privacy-by-design, explainability & auditability**
Data minimization, audit logs, and decision traceability aligned with EU & French requirements.

Designed to integrate with licensed institutions, not bypass them.

Go-to Market Plan

Customer Acquisition – Phased & Trust-led

Phase 1 – B2B2C Pilot (Credibility First)

1. Partnerships with licensed banks / PSPs (France-first)
2. Gen Z pilot cohorts via partner banks with compliance-approved use cases
3. Pilot: 5–10K Gen Z users, 1–2 licensed partners

Phase 2 – Direct B2C Expansion

1. App Store + **trusted referral loops** (Gen Z-native)
2. University & city-based rollout
3. **Freemium → Premium conversion**

Phase 3 – Scale via Licensing

1. White-label modules for banks & neobanks
2. Revenue share on compliant transactions
3. EU expansion via licensed partners post-French validation

Primary Channels

- Bank / PSP partnerships
- In-app referrals (trusted source)

Secondary Channels

- Campus ambassadors (France)
- Content-led trust (financial clarity, not hype)

Non-focus (explicitly say it)

- Paid ads at early stage
- Influencer marketing (misaligned with regulated trust)

We don't acquire users before trust. We borrow trust, then earn users.

Key Risks & How We De-risk Them

**Regulatory
Complexity**

Handled via ACPR-
first design and
licensed bank pilots

**Adoption risk
(Gen Z)**

Reduced via bank-
distributed cohorts

**AI trust &
auditability**

Built-in explainability
and audit-by-design

Biggest risks are regulatory and trust-based. That's exactly where we start.

Founders with Regulated Banking & AI DNA

M Saeed Ahmadi Pouya, CEO

**22+ years building regulated
Fintech & AI products**

Payments, digital identity,
compliance systems

Azadeh Khani Solout, Design
**11+ years UX/UI for large-scale
consumer products**

Used by 100k+ users in regulated
environments

Engineering, compliance and growth leadership in advanced discussions (full-time planned)

Seed Funding & 18-Month Milestones

- 45% Product & Engineering (AI, compliance-native infra)
- 30% Regulatory & Security (ACPR/AMF, audits)
- 25% Go-to-Market (bank pilots, Gen Z rollout)

€1.5–2.0M Seed

18-month runway

- ACPR-ready AI & audit framework
- 2 licensed bank/ PSP pilots live (France)
- 10–20k Gen Z users via partner banks

Capital used to de-risk regulation, not to buy growth.
